DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the first pulse generator means and the second pulse generator means must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-38 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is indefinite because the claim is misdescriptive. The claim calls for the clock terminal of the register to be coupled to the input clock terminal (CLKIN), however this is not what is disclosed in the figures. The figures show the clock terminal of the register being coupled to a second output (CLK_UPDT) of the first counter circuit.

Claim 2 is also indefinite because the claim is misdescriptive. The claim calls for the input terminal of the first oscillator circuit to be coupled to the input clock terminal (CLKIN), however this is not what is disclosed in the figures. The figures show the input terminal of the first oscillator circuit being coupled to a flip-flop output (CLK_QP) within the first counter circuit. Claims 13 and 24 are indefinite because it is not clear to the examiner from review of the specification and the drawings what applicant is referring to as the first and second pulse generator means. It appears to the examiner that there is only one output clock generator that is capable of providing both the first and second pulse on the output clock signal. Correction or clarification is required.

Claims 3-12, 14-23, and 25-38 are also rejected due to the limitations of the base claims and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
